

## *Let ACME put a competitive edge on your line!*

ACME Electronics Corporation is an ISO-9001, ISO-14001 certified manufacturer of Manganese-Zinc & Nickel-Zinc ferrite products in Taiwan. Established in 1991, we have built a reputation as a major and reliable supplier to ferrite users worldwide. Our complete dedication in research and development and manufacturing excellence has enabled us to offer a wide range of high quality, standard and custom-made Mn-Zn & Ni-Zn ferrite products in different materials to our customers.

competitive price. Our facilities are fully equipped with the most modern equipment and an integral manufacturing process from powder preparation to final product finishes, to offer our customers with products of the highest quality.

The ultimate goal of ACME is to achieve total customer satisfaction. To this end, we have always recognized and valued our customers and their needs and have made a long-term commitment to provide high quality products and professional customer service. ACME is not only providing you with quality products, but also with full support and partnership. As such, purchasers and end users of our products are more than just customers; they are our partners. They are driving forces to ACME's success.

ACME has three manufacturing plants strategically located in Taiwan and China. Being part of the Great Chinese Economic Zone, these vital locations have given us an advantage to serve our customers with prompt delivery and

## Introduction

ACME Electronics Corporation was launched in 1991 by USI Corporation, a large Taiwanese enterprise in the petrochemical and plastics industry. The founding vision for the new business venture was that it would become a global source for quality soft ferrite products through the use of technology and manufacturing excellence. This vision is forever stamped in the selection of the name for the new business, ACME – Aggressively Committed to Manufacturing Excellence.

Kuanyin Industrial Park located in Taoyuan County, Taiwan, was selected for ACME's first manufacturing site, and by 1994 ACME's commercial operations became fully active. ACME quickly experienced favor from the domestic electronics industry in Taiwan. International interest soon followed, and in 1998 a second factory, Gold Amb Electronics, was established in Donguan, Guangdong Province, China.

Global opportunities unfolded after implementing ACME's first production site in China and another factory was established in 2000, this time in Kunshan City, Jiangsu Province, China. In 2003, ACME Magnetics USA was launched to reach major design centers located in North America. The construction of a fourth production site, ACME Electronics (Guangzhou) Co. Ltd., was initiated in 2005. Located in Guangdong Province, China, this new site will be equipped with a full manufacturing line to increase ACME's overall production capacity and will focus on serving customers in Southern China.

The original vision of global influence continued to be achieved and confidence in ACME's future was further realized in 2005 when investment in ACME became available through the sale of public shares in Taiwan. Major shareholders include USI Corporation, China Development Industrial Bank, Marvel Chemical Manufacture Co., Ltd. and USI Investment Co., Ltd.

Fueled by technological expertise and aggressive, high-quality manufacturing, ACME continues to walk the path of steady growth into the new year of 2006. ACME's corporate headquarters in Taipei, Taiwan, is the company hub for global marketing, and the R&D center for new product development. ACME's production site in Kunshan, China, serves customers located in Eastern & Northern China, and supports customer design centers and expanding markets located in regions of Northern Asia, India, North and South America, and Europe.

ACME's new Guangzhou site will focus on business development in Southern and Southeastern China, and will support expansion into emerging markets in Eastern Europe.

ACME's soft ferrite products are core elements of inductive passive electronic components commonly known as power transformers, loaded coils, choke and demagnetization coils. These components find their application in "3C" products such as power supplies, computer notebooks and monitors, broadband network systems, telephone switching systems, relay stations, mobile phone, PDA, LCD TV, digital cameras, digital video cameras, palmtop video games and scanners, and more.
